Product Description

300 Series 316Stainless Steel Pipe Welded Tubes SS Square Rectangular 2500mm

Grade 316, like all steel alloys, is mostly made of iron. Carbon is a significant metallic addition in steel manufacture, while chromium is required in levels of 10% or more to create steel stainless. However, the molybdenum content in grade 316 permits it to outperform several other alloys in terms of corrosion resistance. 316H, 316L, and 316Ti are popular 316H, 316L, and 316Ti varieties, all of which are available in completed products and tube stock shapes.

Although low carbon versions, grade 316L, have greater weldability, high carbon variants, grade 316H, perform better at high temperatures, as does 316Ti, which contains up to 0.5 percent Titanium.
